

KEYSTONE K-LOK[®] SERIES 38

HIGH PERFORMANCE BUTTERFLY VALVE

GENERAL APPLICATIONS

- Chemical/petrochemical processing
- Purified gas
- Steam
- Vacuum
- Water and utilities

TECHNICAL DATA

Size range:	DN 50 to DN 400
Body style:	Wafer and Lug
Vacuum rating:	1.354×10^{-3} mbar (1.016×10^{-3} mm Hg)
Pressure rating:	PN 10, PN 16, PN 25
Temperature rating:	-29 °C to 200 °C

Lug style valves are full rated for bi-directional dead-end service as standard and incorporate an uninterrupted flange gasket sealing surface.

Series 38 valves are designed to the latest valve and chemical industry standards, including: EN 12569, EN 593, EN 16668, and Namur NE 167.

FEATURES AND BENEFITS

- Interference polymer seat design provides bi-directional, drop-tight shut-off in vacuum as well as at full rated differential pressure. Its unique design does not rely on pressure to assist sealing therefore seals at high and low pressures, as well as media containing particulate.
- Integrally cast-in disc position stop perfectly locates the disc in the seat, achieving maximum seat and seal life, reducing total cost of ownership.
- Clamping sleeve enhances vertical alignment of the disc and shaft while in service including during thermal cycles, resulting in reduced wear of the seat and further extension of the seat and seal life.
- All valves have been certified for low emissions to the latest edition of ISO 15848-1 tightness class BH endurance class C03.
- Unique packing design allows for use in pressure as well as vacuum without modification or special assembly.
- Unique gland bridge design compensates for uneven adjustment of gland nuts, reducing packing leaks and maintenance costs.
- Blow-out resistant shaft is standard on all valves for increased operator safety.
- Disc taper pins are tangentially positioned placing them in compression rather than shear stress, which eliminates potential for failure and increases safety.
- Extended neck allows for up to 100 mm of pipeline insulation, allowing access to packing gland, for size DN 100 and above. For size less than DN 100, insulation height is equal to DN number in valve (e.g., 80 mm for DN 80).

KEYSTONE K-LOK® SERIES 38

PRINCIPLES OF OPERATION

PRINCIPLES OF OPERATION

K-LOK's unique two-piece shaft and double-offset disc/shaft design allows for high cycling and creates a lower disc profile with increased capacity and a rangeability of 33:1.

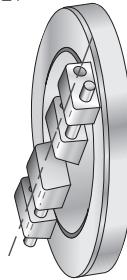

In addition to increasing the flow area across the disc, this design minimizes wear points between seat and disc.

The first offset is achieved by locating the shafts downstream of the center-line of the seat. This allows for a totally unobstructed 360° sealing surface.

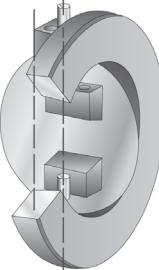

The second offset locates the shafts off-center of the vertical axis of the seat.

The combination of these two offsets creates a camming effect as the disc swings into and out of the seat. The disc lifts quickly out of the seat in the first few degrees of travel and does not contact the seat again until it is nearly closed. There are no wear points between the seat and disc, while operating torques are reduced and seat life is extended.

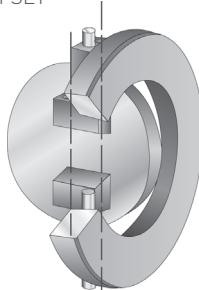

DOUBLE OFFSET

FIRST OFFSET

SECOND OFFSET

Adjustable shaft packaging

The K-LOK's unique shaft packing is composed of 3 rings of braided PTFE rope between one PTFE V-ring at the top and bottom. The packing operates on an interference fit with the body and therefore will seal in pressure and vacuum. Many other manufacturers' designs will require special packing for vacuum services. This packing is easily field adjustable without the need to remove actuation. However, additional protecting cups can be supplied on request to prevent gland bolt adjustment, if desired. Another important feature is the use of a packing gland bridge which has been designed with a spherical radius for 360 degree contact with the radius on the packing gland which allows for even compression on the packing even with uneven tightening of the adjustment bolts.

Blow-out resistant shaft (BOR)

The Keystone K-LOK high performance butterfly valve contains a blow-out resistant shaft as a standard. This is achieved by machining a groove in the shaft that allows a snap ring to lock into the shaft groove. The packing gland follower is provided with an undercut on its lower surface which encapsulates the locked in snap ring. This design provides positive retention of the shaft in the unlikely event of a shaft breakage.

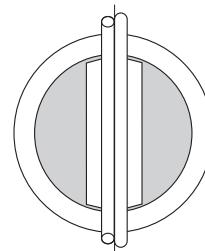

Fugitive emissions certified

All Series 38 valves are certified for low emissions to EN 15848-1 tightness class BH endurance class C03 and come standard with live loaded packing. This certification is also acceptable for TA LUFT-specified applications.

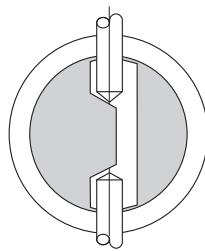

Two-piece shaft vs. one-piece shaft

K-LOK's disc geometry maximizes flow capacity by increasing the available flow area through the valve. This increase in disc efficiency results in a higher valve C_v .

SEAT DESIGN

SEAT DESIGN

SEAT REPLACEMENT

SEAT DESIGN

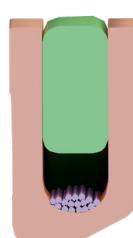

The K-LOK seat is a true interference seat design and unlike most other manufacturers does not rely on line pressure to assist in sealing. All seats seal drop-tight and bubble-tight bi-directionally at low and high pressure as well as vacuum. Given the interference seat design, the K-LOK will also operate in dirty services where most pressure assist valves fail. Polymer (PTFE, RTFE) seats incorporate a unique design consisting of a stainless steel braided wire winding, enclosed in a U-shape envelope to provide seating energy and memory. This wire winding allows axial flexibility in both directions of flow. The winding also allows radial flexibility when the disc is not fully closed, reducing seat/disc interference, seat wear and shaft torque. When the disc closes, it provides circumferential stiffness and assures the required disc/seat seals tight in both vacuum and pressure.

SEAT REPLACEMENT

Seats for Keystone K-LOK Series 38 are replaceable. Refer to IOM. Disassembly of the disc and shaft is not required.

SEAT MATERIALS

Seat	Material	Typical applications
1. RTFE	Reinforced polytetrafluoroethylene	Steam, chlorine, ammonia, nitrogen, water, gasoline
2. PTFE	Polytetrafluoroethylene	Pharmaceuticals, air, potable water, dyes, white mediums
Wire wrap	Stainless steel braided wire	
Seat backing ring	Stainless steel	

KEYSTONE K-LOK® SERIES 38

SEALING INTEGRITY

SEAT TIGHTNESS

All polymer seated valves are factory tested for bi-directional bubble-tight shut-off, in accordance with the requirements of EN 12266-1 Leakage Rate A.

BI-DIRECTIONAL DEAD END SERVICE (LUG STYLE VALVES)

The Keystone K-LOK Series 38 in a lug style body is designed to be used in dead end service applications and will hold full rated pressure with the pipe flange removed on either side of the valve. This is accomplished with an uninterrupted flange sealing surface on the seat retainer ring in accordance with EN 12569. This feature will prevent any leakage between the pipe flange and the valve due to exposed seat retainer ring bolting.

KEYSTONE K-LOK® SERIES 38
 DIMENSIONAL DATA - WAFER STYLE WITH HANDLE

DIMENSIONS (mm) - SERIES 38, PN 10 / PN 16 / PN 25, WAFER STYLE WITH HANDLE

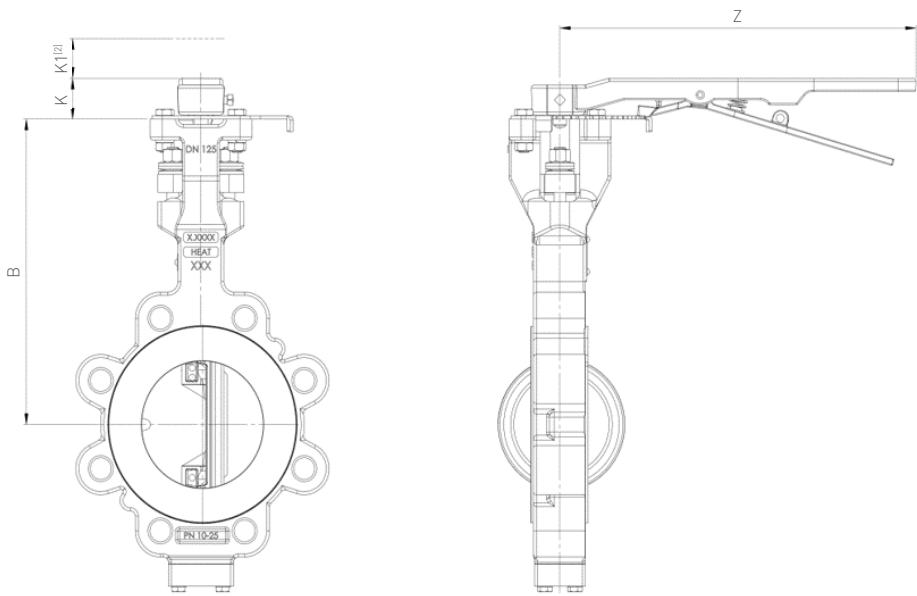

Size DN	ISO Flange drilling	B	K	K1 [2]	Z	Mass (valve + handle) (kg)
50	F07	181	30	30	267	6.1
65	F07	205	30	30	267	6.1
80	F07	225	30	30	267	8.1
100	F07	265	30	30	267	12.1
125	F10	292	38	38	356	17

NOTES

1. Refer to individual drawing for further details of valve and handle.
2. Minimum clearance required for removal of handle.
3. Handles are not recommended on valve larger than DN 100. If used on valves larger than DN 100, pressure should be 10 bar or less.

			16	M33x3.5 x 135	16	M33x3.5 x 90

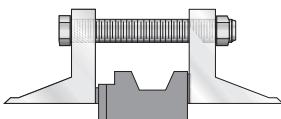

NOTES

Recommended bolt length assumes; Gasket thickness 2 mm for < DN 300 and 3 mm for > DN 300.

Recommended bolt lengths are based on EN558-1 Series 25 face-to-face.

KEYSTONE K-LOK® SERIES 38

VACUUM RATING AND FLOWRATES

VACUUM RATING

The combination of interference fit seats and bi-directional packing makes the K-LOK especially well suited for vacuum service.

Standard K-LOK high performance valves are rated to an absolute pressure of 1.354×10^{-3} mbar (1.016×10^{-3} mm Hg). Configurations may be available to satisfy higher vacuum applications.

FLOWRATE CO-EFFICIENTS

K_v VALUES VS. TRAVEL POSITION

Size DN	Angle of opening								
	10°	20°	30°	40°	50°	60°	70°	80°	90°
50	2	3	10	21	33	45	52	56	58
65	5	9	16	29	46	69	96	128	147
80	7	10	21	37	58	86	120	160	185
100	14	20	38	69	112	167	232	310	356
125	26	38	72	128	209	315	434	580	677
150	43	60	112	198	319	474	655	871	983
200	72	101	216	377	599	907	1290	1725	1983
250	124	174	391	650	1021	1570	2251	3052	3735
300	179	262	584	906	1401	2384	3308	4590	5689
350	222	310	644	1022	1646	2690	3807	5366	6940
400	265	372	692	1226	1973	3115	4526	6491	8403

NOTE

K_v is the volume of water in m³/h that will pass through a valve with a pressure drop of 1 bar at 20°C.

KEYSTONE K-LOK® SERIES 38

TORQUE VALUES

SEATING AND UN-SEATING TORQUE

Seating and un-seating torques are a function of the size of the valve and the shutoff pressure of the system. Specific torque ratings can be found in the seating/un-seating chart at the intersection of the 'size' row and the 'shutoff pressure' column. Torques listed are for PTFE and RTFE seated valves. All torques listed are for normal service conditions (i.e. operating frequency is a minimum of once per month; disc corrosion is expected to be mild or minor, the media is a clean gas, liquid or steam, and is non-abrasive) and chemical effects upon the seat are minor.

PTFE AND RTFE BI-DIRECTIONAL SEATING AND UN-SEATING TORQUE VALUES

Valve size DN	Seating and un-seating torque (Nm)		
	10	16	25
50	25	34	49
65	25	34	49
80	28	39	55
100	54	74	105
125	105	130	168
150	155	185	230
200	233	308	420
250	377	482	640
300	519	650	847
350	763	936	1197
400	1057	1272	1593

NOTES

1. Torques are applicable only to PTFE and RTFE seats in noncorrosive or non-abrasive services such as water.
2. For corrosive, abrasive or other services than water, multiply by the following factor:

High solids slurry:	x 1.5
Dry gas:	x 2.0
Dry powders:	x 2.7
Liquids other than water:	x 1.2
Lubricating fluids:	x 0.8

For services that combine unfriendly conditions such as extreme temperatures and high solids, or corrosive with high temperatures, contact your sales representative.

Reinforced PTFE (RTFE)	25	25	25	25	23.8	22.2	15.5	5.6	3.4

NOTES

- 29 °C to 200 °C is the limit for ISO 15848-1 certification of the valve, higher temperatures are shown for informational purposes of material limitations.
- A manufacturer standard C4 painting system is applied as standard to Carbon steel valve bodies and satisfies the requirement of NE167, but may experience deterioration in applications where external conditions are above 120 °C.
